

ENVIRONMENTAL POLICY

Our approach to promoting environmental conservation is simple: the sale and delivery of ecologically conscious products and services whilst reducing our own impact through our business culture and appropriate technologies.

We want a greener world and understand that our customers do too. Our group offers a complete 'green-cycle' for the facilities buyer. New products are sourced from manufacturers who promote ecologically harvested timbers, recycled materials and other earth friendly components.

Our premises and vehicles are maintained to high standards to reduce pollution and staff are encouraged to save heat and light energy consumption. But our unique strength is our Furniture Reselling Programme, which for more than 25 years, has refurbished and traded used office furniture. It currently re-deploys 96% of the furniture it receives and by developing partnerships for recycling any segregated waste, sends less than 1% to land fill.

Our goal is to improve on these percentages. Our clients can be provided with written confirmation that their used furniture has been ethically disposed of through our processes, in order to demonstrate their own 'green' credentials.
